Burpee's CELTUCE

Tempting Ways to Use Burpee's Celtuce

In 1938, from far-off Western China, near the border of Tibet, Reverend Carter D. Holton, a missionary, sent us a few seeds of a new vegetable and with them a letter that read in part: "I am

sure you will find pleasure in the growing and in the taste of this new vegetable. It is widely used by the people living in this province. The young leaves are eaten as lettuce and the stalks are peeled of their tough outer skin and the heart eaten either raw or cooked. It is truly delicious, with a taste all its own, perhaps slightly suggesting that of celery but different and milder."

After having grown Celtuce for the last four years on both our Fordhook and Floradale Farms and eaten it prepared in many ways, we whole-heartedly agree as to its delicacy and flavor.

Burpee's Celtuce belongs to the lettuce family but is entirely different in its growth and uses. The young leaves may be eaten as a salad, but its chief value is its central stem or stalk.

Whether Celtuce stalks are to be eaten raw or cooked, you must first remove all the outer skin and fibrous layers down to where they become light green and tender. As a raw vegetable, cut the stalks into 4- or 5-inch lengths and split lengthwise; chill and eat as you would celery or carrots, with salt or mayonnaise.

Cooked Celtuce stalks are pale green, attractive in appearance, and have a pleasing, mild flavor suggestive of celery, lettuce, asparagus, broccoli, zucchini and summer squash. There are many ways to use Celtuce; below we give a few recipes which were originated and tested in the Country Gentleman kitchen by Mrs. Caroline King. Other ways to prepare Celtuce will suggest themselves; it has so many possibilities.

290 Burpee's Celtuce is easy to grow in the home garden and is well adapted for market and shipping. Plants grow quickly, forming a rosette of light green leaves which may be used, when young, as "greens." In less than 90 days after seed is sown, the central stem or stalk is usable and will be found most tender at this age. The stalks are solid throughout, the skin greenish white and tough but the inside is very succulent, most delicate pale green, crisp and brittle. Make first sowing of seed as soon as ground can be worked in the spring. Succession sowings at intervals of a week or ten days will give a continuous supply. Grow Celtuce—it is new, it is good, it is interesting and it is healthful; the best new vegetable for 1942. Pkt. 15¢; ½ oz. 35¢; ½ oz. 65¢; oz. \$1.25.

New BURPEE'S YELLOW COSMOS

Silver Medal Winner All-America Selections for 1942

1943 Burpee's Yellow Cosmos or Yellow Flare is the first and only yellow cosmos in cultivation; the companion to Orange Flare and like it in earliness, plant habit and ease of culture. The color, however, is different—bright yellow, fresh and clear, with faint, almost unnoticeable darker golden shadings. Flowers are single, $2\frac{1}{2}$ in. across, with jagged or pointed ray tips, which are somewhat incurved.

Plants are bushy and vigorous in growth, 3 ft. and more tall, depending on location; flowering is extremely free, beginning when plants are small and continuing and improving with the development of the plant until checked by frost. Showy in the garden or for home decoration. Grows anywhere, and its early flowering is of particular value in sections having short summers.

Pkt. 25%; $\frac{1}{8}$ oz. 60%; $\frac{1}{4}$ oz. \$1.00.

New ias Burpee's Super Giants

3175 **Burpee's Super Giants** are the largest of all Zinnias and contain the loveliest colors and combinations of colors ever seen in this flower. Rare and unusual shades of cream, buff, apricot, salmon, rose and orange predominate, with a few yellows and whites; scarlet and crimson are not prominent, though there are some very attractive flowers in these colors. One is impressed at the many two-tone and three-tone color effects seen in some of the blooms.

Flowers are truly giant, 5½ to 6½ in. across and of a wide diversity of flower form; some like Dahlia Flowered, others like Giants of California and still others with curled and twisted chrysanthemum-like flower heads. Striking in the garden; invaluable for cutting. 3 ft. tall. See color illustration on back cover.

30 seeds 10¢; 100 seeds 25¢; 225 seeds 50¢; 500 seeds \$1.00.

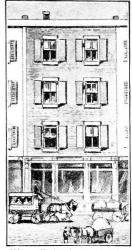

Dear Fellow Gardeners:

Many years ago my father started this business. That was in 1876, the Centennial Year of American Independence.

Father was only 18 years of age, and already had studied medicine for two years at the University of Pennsylvania. He had never wanted to study medicine but did so because his father and grandfather were famous doctors and surgeons in Philadelphia. Father could not bear to see people suffer—he loved to see things grow.

At the age of 18 he gave up his study of medicine and started in the seed business on Church Street. facing Old Christ Church in Philadelphia.

For the first three years it was hard sledding. Then gardeners everywhere began to realize that here was a man who was trying to serve them. of people came to know my father through his seed catalog. They seemed to sense that his first thought always was of others. They knew that Burpee's Seeds were as good as

Where Father began in

father was able to grow them. One time, in writing of our business, father said: "A business that

has no vision of the future, or the object of which is mere money making, would not be worthy a life's work."

This business is the result of my father's "life's work" and its growth is proof that he had a "vision of the future."

The seed business is done entirely on confidence. When you buy seeds you are buying a promise that cannot be fulfilled until harvest time.

The confidence you and millions of other gardeners have in Burpee is the greatest heritage I received from my father.

To serve you well is perhaps the greatest tribute I can pay to him.

Faithfully yours,

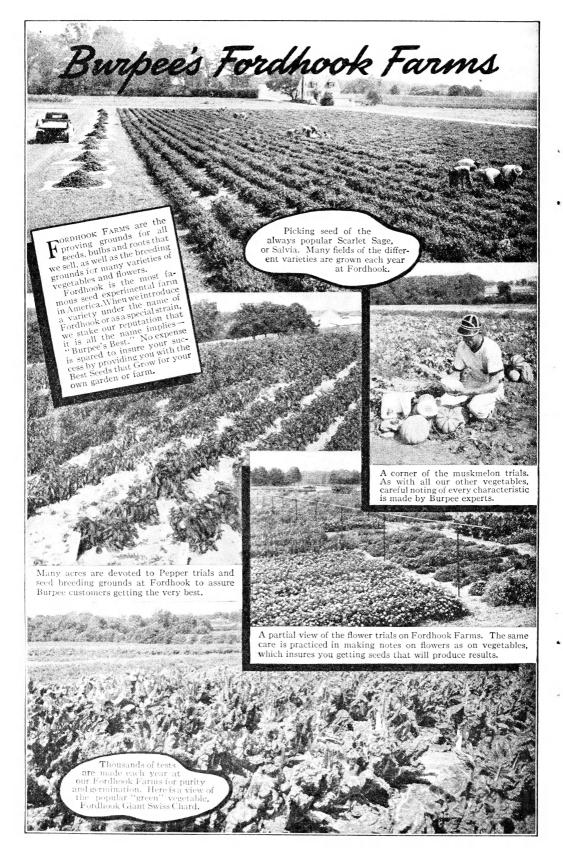

David Dompee

UIPPEES SEEDS GROW and are The Best that Grow

Sixty-six years ago, the Burpee seed business started with the determination to provide seeds of known quality and seeds that would produce the best results. We have always endeavored to offer something new and different from existing varieties if it has merit.

Our business could not have grown to be the largest direct-by-mail Seed House in the world without the loyal support of our many friends and customers, some of whom have been with us since we started. Recently, David Burpee received a letter from one of his father's first customers. With Mrs. Richards' permission, we print it here:

"This year is 65 years since I purchased seeds from your Father. It was the Centennial year. I was ten years old. Every year for 65 years I have never missed a year but what I have eaten delicious vegetables grown from Burpee's Seeds. And every year for 65 years my eyes have gazed upon beautiful flowers grown from Burpee's seeds and bulbs. No words can tell how much I have appreciated their reliable quality. I have never had a failure. As I look back over the 65 years, I consider that it has been a wonderful privilege that I have been so fortunate as to obtain such high quality seeds and bulbs as you have produced all through these many years.

Yours truly,

Arapahoe, Nebraska

(signed) Mrs. J. E. W. Richards"

Thank you, Mrs. Richards, for this sincere, unsolicited testimonial. It has been a privilege and a pleasure to have ed you these many years. Your faith, and that of our many other customers, in us is our most valued possession. served you these many years.

Reduce the High Cost of Living Grow Your Own Vegetables and Flowers

Not only have food prices risen but in many markets the past fall there was a scarcity of fresh vegetables. Other countries have bought enormous quantities of canned vegetables, thereby depleting the supply here. Shortage of labor on farms and truck gardens has curtailed the planting of vegetables for the market. If you have a piece of ground, plant a garden in 1942; plant vegetables for food and flowers for beauty.

This catalog offers a long list of varieties, the good old standbys and the new varieties that have merit. Burpee's Celtuce is the most sensational new vegetable for 1942. It is shown in color on the inside front cover with description and recipes on page 1. Some of our friends have already sampled Celtuce and here is what they think of it:

"Celtuce is certainly a most unusual vegetable. I served it in various ways to different persons and everyone found it delicious and commented on its illusive flavor which makes you want more.

"Celtuce, when cooked, has a pleasing, mild flavor. It doesn't taste quite like any other vegetable, though the ones with which people associated a similarity were celery, asparagus, broccoli, zucchini and summer squash. We predict it will become a popular vegetable.

"Celtuce was enjoyed as a cooked vegetable, cooked and chilled in salad, raw in salad and when eaten as celery

"Celtuce stalks were cut into 5 to 6 in. lengths, sliced lengthwise, dipped in savory bread crumbs and turned to a golden brown in deep oil. This was pretty special and overtook eggplant done in a similar manner, which has always been a favorite.

"Celtuce was served both raw and cooked to several of our Institute Tasting Staff and their comments were certainly most enthusiastic. The vegetable has such a delicate yet individual flavor.

"Celtuce was enjoyed plain boiled, served hot with butter and lemon sauce in the manner of broccoli, also com-bined with young scallions and tiny fig tomatoes as a redwhite-and-green accompaniment to sphagetti.

"Celtuce, cut in long, narrow strips and served raw, is delightfully attractive in appearance and had a very nice crispness and was cool as well as crisp as we bit into it. Cooked Celtuce had a flavor that was most subtle.

"Celtuce was enjoyed both as a crisp appetizer and a cooked vegetable. I feel sure it will be a popular vegetable.

"Celtuce was very appetizing and a welcomed change from the vegetables we have had on our table lately.

"Celtuce was given to my four-year-old child and she devoured it like she would an ice cream cone.

"Celtuce is a new taste thrill; I am sure it will gain instant popularity.

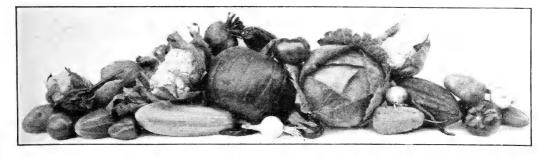

Braised Celtuce, Cream of Celtuce Soup, young Celtuce leaves with bacon dressing, are just a few other ways that Celtuce may be used Be sure to grow it in 1942.

Burpee's Popular Garden Collections

It is surprising the quantity of vegetables that can be raised on even a small plot of ground. Living costs are rising, which alone should be sufficient reason for the greater production of home-grown vegetables. Then, too, the vegetables you grow will have much better flavor than those you buy. The estimated value of home gardens in the United States exceeds the value of all fresh vegetables (except pota-

toes) grown for market. Home vegetable gardening is a big business, and a very interesting and healthful one for all to enjoy.

For your convenience, we offer three assortments of Burpee's Best vegetable seeds to accommodate three different sized gardens. They were especially made up for those who want to have a vegetable garden but are in doubt as to which individual varieties to select. Buy the collection that best fits the size of space you have available. All seeds are of the Highest Quality and the collections are sold at much less than regular prices if varieties were bought separately. All are sent postpaid.

Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full

sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All the different classes of zinnias are easy to grow.

Old-Fashioned Five-petaled Single Nasturtium

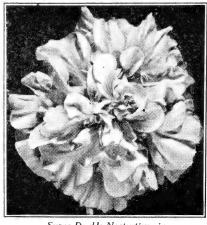

Burpee's Miracle Nasturtium Mixture

2334 Double and Super-Double Mixed These Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seem of this wonderful mixture will produce various types of flowers; seem will be semi-double, like Golden Gleam, with 8 to 10 petals; others will be Super-Double, with as many as 40 to 60 true petals, like the illustration opposite. Plants are strong growing and produce an abundance of large, long-stemmed, sweet-scented flowers, 3 in. across.

Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of Burpee's Super-Double Nasturtiums (Tropacolum majus Burpeeii); when fully open, they resemble greenhouse carnations. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other nasturtiums. All plants will be of the tall Gleam type; adapted for beds, wide borders, ground cover, or trained upon strings or wire. They may, however, be cut back if a dwarf effect is desired.

Burpee's Super-Double is the only **Nasturtium** to be given a **Plant Patent.** Plants grown from our Miracle Mixture seed are protected by **U. S. Plant Patent No. 141.** Seeds are sold under such conditions.

Packet of 10 seeds for \$1.00; 3 packets for \$2.50.

BURPEE'S ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early varieties, we suggest that you have seedlings of later flowering ones or other flowers coming along to take the place of the earlies when they are through blooming.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms sow seed indoors in boxes or pans six weeks before your usual outdoor planting time.

* Varieties marked with an asterisk (*) are the Wilt-Resistant Strain.
They are highly immune to "Wilt disease" or "Stem-rot."

Violet Glory-earliest of all Asters Pkt. 15¢.

EARLIEST OF ALL ASTERS

The plant is not very leafy, seeming to give all its strength to the flowers, which are freely borne on stems 12 to 15 in. long. Plants are of open, spreading habit, $1^{1/2}$ ft. tall and about 2 ft. across. Extreme earliness and good cutting stems make Violet Glory a most welcome, new type Aster for the home gardener and florist. Pkt. 15¢; $1\frac{1}{2}$ oz. 55¢; $1\frac{1}{2}$ oz. 55¢.

Burpee's Early Flowering Sweet Peas

Varieties are arranged in each color class from deep to light shades

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—3 to 4 weeks earlier than the Giant Spencer varieties offered on pages 44 to 48. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep, rich soil which must be well drained.

 ${}^{\times}$ We have marked with a star $(^{\ast})$ the varieties that we particularly like in each color class; if you are in doubt as to which to choose, make your selection from those thus marked.

Burpee's Annual Larkspurs For Perennial Larkspurs, see Delphinium, page 82.

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better-but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to 11/2 ft. apart.

Burpee's Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (Aubrietia), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent free upon request.

Average heights and blooming season are given in the description for each class; some variation is natural in different localities.

Explanation of Keys:

- D Succeeds in dry or sandy soil.

BURPEE'S DAHLIA ROOTS

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results, whether for garden display or cut-flower purposes. We supply strong root divisions from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. Sow seed when the soil has become warm but not later than June 15. Place 5 to 8 beans around each pole, cover with 2 in. of soil, and firm to assist germination. SHELL BEANS (may be used either green or dried)

Grown mostly as dried beans for winter use. The culture is similar to that recommended for Green-Pod Bush Beans, but shell beans should be left on the vine until the pods are matured. The vines are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. POLE LIMA BEANS

Pole Lima Beans are easily grown in any rich, well-drained garden soil. While they mature somewhat later than bush lima beans, they greatly outyield them per square foot of garden space. Vines should be given support, the most frequently used being rough poles, 7 ft. or more tall, sunk 112 to 2ft, deep in the ground and spaced 3 to 4ft, apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (eyes down) around each pole, cover with 2 in. of fine soil and firm to assist germiput 6 to 8 seeds (eyes down) around each pole, cover with 2 in. of nne soil and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row.

105 Burpee's Best Pole Lima O

92 days. The Fordhook among the pole limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each plant.

Burpee's Best will climb 10 to 12 ft. under average conditions, and pro-

duce pods in clusters of 4 to 8 along its entire length. The pods are straight, 5 to 6 in. long, 11/2 in. broad, and nearly one inch through. well filled with 4 or 5 and sometimes 6 big, thick, plump beans of delicious flavor. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest growing it in its place.

65 BURPEE'S FORDHOOK BUSH LIMA BEAN o

Introduced by Burpee and named for Burpee's Fordhook Farms

75 days. Burpee's Fordhook is known and grown wherever beans are planted. It is the leading variety of bush lima beans, and in the important commercial sections it is usually the only variety grown which shows its desirability.

The plant is bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of 2 ft. or more, very vigorous, with many flowering branches. Pods are borne close to the plant and often on the ends of the branches. They are 4 to 4½ in. long, 1 to 1¼ in. wide, and 34 in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans of a delicious flavor, not unlike chestnuts. Seeds are green when immature, holding this color until quite old, becoming cream colored when ripe.

The dry, mealy quality of Fordhook is familiar to every one who uses lima beans. The beans are large and there is, therefore, less waste in shelling than with other varieties. Its bearing season is long and a planting may be picked over a period of a month or more.

For home garden or commercial use we recommend this great bean highly. Fine quality, always salable, attractive appearance, and large pods allow us to say that in lima beans, Fordhook is the best. (For a pole bean of the Fordhook type, plant Burpee's Best.)

We grow our Fordhooks ourselves in California, selecting them continuously and checking over stocks by trials at Fordhook Farms. As the originator of this fine bean, we invite your order for the finest seed obtainable. Pkt. 10ξ ; $\frac{1}{2}$ lb. 25ξ ; lb. 45ξ ; 2 lbs. 85ξ ; 5 lbs. \$2.00.

How to Grow Bush Limas

Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 5 in apart in rows 2½ to 3 ft, apart, and cover with 2 in. of fine soil. When the plants are well started thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties, such as Philadelphia Bush. Wood's Prolific, and Baby Fordhook. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. Pick the pods as soon as the beans have reached edible size. One pkt. of seed will sow 25 ft. of row; one lb. for 100 ft.; 60 lbs. to an acre.

61 Baby Fordhook Bush Lima

70 days. A thick-seeded, small lima bean of far better quality than the flat type; bred by the U. S. Department of Agriculture. It was designed especially for canning and freezing where a high quality baby lima bean has been sought for many years. Home gardeners, too, will appreciate Baby Fordhook with its surprisingly heavy crop of pods under almost any conditions. Its quality is excellent and the beans retain their green color until they are quite old.

Plant is truly bush, about 14 in. tall, with shiny, dark green leaves, heavily productive, bearing pods quite close to the stem. Pods are 1944 in. long and 44 in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded in the pod, as may be seen in picture to the right. Seed is thick, green, turning cream when dry.

And business, 18 to 24 in, tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. 63 Burpee's Improved Bush Lima Bean o

Another World Famous Burpee Introduction

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The pods are larger, the individual beans, either green or dry, are nearly twice as thick, and the plants are more productive and begin to bear 3 days earlier than Burpee's Bush Lima. They are large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 5 to 51/2 in. long, and 1 to 11/8 in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality.

Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety. Try both kinds in your garden this season. You can't go wrong with either, whether you grow for home or market; in fact, many gardeners do plant both varieties each year. Burpee's Improved was introduced by Burpee in 1907,

and now, 35 years later, it has not been superseded by any other variety. It is still the best, large, flat-seeded bush lima bean. We feel a personal responsibility for the maintenance and improvement of this and our other varieties. Pkt. $10\emptyset$; $\frac{1}{2}$ lb. $25\emptyset$; lb. $45\emptyset$; 2 lbs. $85\emptyset$; 5 lbs. \$2.00.

66 Burpee's Philadelphia Bush Lima

68 days. Of special value because it is the largest-seeded bush lima that produces well in the north. It is sure to set a full crop under conditions where some large-seeded limas fail. Pods grow 4 in. long, straight to slightly curved, flat, 1¹⁴ in. wide; each contains 3 or 4 flat, medium-sized beans which are green when immature, turning white. Plants are vigorous, very productive, bearing the bulk of their pods in the center of the plant. Suitable for the home garden, market, canning and freezing. Surpasses the small butter beans in quality.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

68 Wood's Prolific Bush Lima

68 days. Improved Henderson Bush or Baby Lima. One of the earliest maturing bush lima beans, so is especially desirable in northern states where growing seasons are short. Pods are small, 3 to $3\frac{1}{2}$ in, long, each containing 3 or 4 plump beans of delicious, sweet, buttery lima flavor. Plants are truly prolific, and while they begin to bear very early, they will continue to produce until killed by Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75. frost. Use either fresh or dried.

Burpee takes pride in pointing out that four of the six varieties of bush limas listed on these two pages are Burpee introductions. Every one has become popular; each is distinct enough from the other as to build up an enormous demand for all four. For the best seed, buy from the originator.

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the field. Of course, the time is average and some variation is to be expected, depending on the season, locality and time of sowing.

Follow the Bull's Eye We have used this mark O for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark Q, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under all conditions.

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover 1 in. deep. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." One pkt. of seed will sow 25 ft. of row; one oz. for 100 ft. A rich, sandy loam, mellow and deep, produces the best roots.

Yellows-Resistant Cabbage

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experimental Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following varieties:

191 Early Jersey Wakefield O

63 days. An improved strain especially selected for yellows-resistance. The heads are of conical form, with a broad base and pointed top. Compact plants and very productive. About the first of this group of resistant cabbages to mature. Fine for cole slaw, salads and for boiling.

Pkt. 10¢; oz. 50¢; ½ lb. \$1.85.

170 Marion Market ⊙

73 days. Resembles Copenhagen Market but matures about 6 days later than our Special Strain and makes a much larger plant. The heads are almost round and very solid, weighing 5 to 6 lbs. each. Favorite early variety for market or home use on yellows-infested land. Pkt. 15¢; oz. 65¢; ¼ lb. \$2.35.

172 Improved Allhead Select

72 days. Firm, solid, well-rounded, flattened heads carried on short stout stems. The core is decidedly small. It is the earliest of the yellows-resistant large flat-headed cabbages. Stands long without bursting. Recommended only where the standard strain cannot be successfully grown. Pkt. $10 \ensuremath{\varepsilon}$; oz. $50 \ensuremath{\varepsilon}$; ¼ lb. \$1.85.

190 Wisconsin All Seasons

84 days. Bred from All Seasons and has inherited all the good qualities of that excellent cabbage. It is the hardiest of all flat-head varieties and is much in demand for making kraut. Heads are hard and solid. Stands hot weather unusually well. For "yellows" infested land. Pkt. 10¢; oz. 50¢; ¼ lb. \$1.85.

174 Wisconsin Hollander O

120 days. Selected from the famous Danish Ballhead and requires about the same time to come to maturity. Heads are large, round, flattened on top but quite deep; weigh 5 to 7 lbs. Resistant to "yellows."

Pkt. 10c; oz. 50c; ½ lb. \$1.85.

181 Golden Acre O

64 days. The earliest of the round-headed yellows-resistant cabbages. Heads are medium sized. 5 to 6 in. in diameter, and weigh 4 to 5 lbs. each. Plants are short stemmed, erect, with few outer leaves. A remarkably uniform and refined strain of exceptional quality and fair keeping ability. Nine days earlier maturing than Marion Market, and as plants are smaller, they may be set closer. For "yellows" infested land only. Pkt. 15¢; oz. 65¢; ¼ lb. \$2.35.

How to Grow Cauliflower

For an early crop, start the seed indoors or under glass in late February and set plants into the garden when soil has become warm. For a main or fall crop, sow the seed in a specially prepared seed-bed or coldframe during June and set plants out in early July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One pkt. of seed will produce about 150 plants; 1 oz. 4000 plants; 2 ozs. are required to produce enough plants for one acre. Days to maturity are from the time the plants are set out in the garden.

HARDY BUNCHING ONION

The plants do not form any bulbs but produce long, straight stalks that are used as scallions or green bunching onions. They are perennial and produce for many years as long as a portion of the plant is allowed to remain. Seeds sown in the spring or summer will provide mild, green scallions late in the fall or, if wintered over, very early the following spring. Plants increase in size as they grow older, and thinning to eight to twelve inches between plants is advised after the first year. In the northern part of the country protection during the winter with a mulch of straw or leaves will make the crop earlier. We cannot supply seed of White Welsh this year, the crop being a total failure. Japanese Bunching is longer with thicker shoots.

GARDEN PEAS

Every home garden can easily produce enough peas to supply the table for many weeks. For a continuous supply of this delicious vegetable, sow the early, midseason, and late varieties as early in the spring as the soil can be prepared. Both wrinkled and smooth-seeded types can be planted early. Besides sowing at the beginning of the season varieties which will mature one after another, also make succession sowings at intervals of 10 to 14 days up to about June 1. Sow again in August for a fall crop. Cover the seed 1 to 2 in. deep. Provide supports for the tall-growing varieties. Inoculation of seed with Legume Aid before planting hastens maturity and increases the yield. A pkt. of seed will sow 20 ft. of row; 1 lb. 100 ft.

EDIBLE-PODDED or SUGAR PEAS

Cook like string beans

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. Pick pods when peas are beginning to form and cook like snap beans. When young, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap or string beans, seeds may be eaten as shelled peas. Vines should be given support of string or brush for best results.

HOW TO GROW PEPPERS

Seed should be sown in a hotbed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set out-doors when all danger of frost is east. Days to maturity given in past. descriptions are from time plants are set in the garden. Peppers prefer a moderately light, well-fertilized soil. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. A pkt. of seed will produce about 100 plants; 1 oz. 1500 plants; 4 to 6 ozs. will produce enough plants for one acre. Treat seed with Cuprocide or Semesan to prevent damping off.

1118 **Table Talk** 75 days. A new, all-purpose tomato—a new and different type of fruit on a new kind of vine. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, dark green, thick and firm in texture, forming a dense mass of foliage which not only protects the fruit, but virtually hides it, especially in the center of the plant. The fruit, unusual in that it combines large size with deep globular form, averages 7 to 8½ ozs. and maintains its size well throughout the season. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small—in other words, it is refined in spite of its size. The color is bright scarlet, uniform and attractive. Slice Burpee's Table Talk Tomato and you will marvel at the structure and the firmness of its interior.

How to Grow Tomatoes

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 5 to 6 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in, apart and cover with $^1\!_4$ in, of soil. When plants are about 2 in, tall, transplant to stand 4 in, apart each way, or pot singly in 3 in, pots. Plant outdoors when all danger of frost is past, in rows 4 ft, apart and 3 or 4 ft, apart in the row. A pkt, will produce about 200 plants; 1 oz. 2000 plants; 2 ozs, will produce enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuprocide.
